Hiring Team
Ottobock SE & Co. KGaA
Berlin, Germany

Dear Hiring Team,

I'm applying for the Lead Fullstack Web Developer role at Ottobock. What draws me to this position is the rare combination of technical leadership with a product that genuinely changes lives. Ottobock has spent over a century restoring mobility and independence through prosthetics and orthotics, and the opportunity to build the web platforms that bring these solutions to practitioners and patients is deeply compelling.

With 8 years of professional experience across React, Node.js, and full-stack architecture, I bring the technical depth this role demands. Most recently, I architected OurNigeria, a full-stack platform built as an Nx monorepo managing 6 applications, including NestJS API backends, Next.js web applications, and a document ingestion pipeline, all orchestrated with Docker Compose, GitHub Actions CI/CD, and Traefik reverse proxy routing. This kind of end-to-end ownership, from architecture definition and technology selection to implementation and deployment, directly mirrors the technical leadership Ottobock is seeking. At Genentech (Roche), I spearheaded a product migration from Vue.js to React, architected a reusable design system with Radix UI and Tailwind CSS for accessibility and consistency, and co-built a RAG-powered chat widget using OpenAI, LangChain, and Vercel AI SDK, demonstrating both my frontend expertise and proficiency with modern AI-powered development.

I also bring strong experience in data visualization (building 22 interactive chart types with Recharts and dynamic dashboards with react-chartjs), real-time data streaming via SSE and EventSource API, and software architecture patterns that scale. On the leadership side, I have mentored junior developers across multiple roles, established engineering standards for code quality and testing at Descasio (reducing bundle sizes by 30-40% and bug reports by 20%), and consistently driven cross-functional collaboration. While I have not worked directly with Three.js or WebGL, my experience with complex interactive UIs, real-time data rendering, and performance optimization gives me a strong foundation to ramp up quickly on 3D/CAD visualization.

I would welcome the chance to discuss how my experience building scalable web platforms and leading technical projects can contribute to Ottobock's digital product roadmap. I am available to start at the earliest convenience. My salary expectations are open for discussion based on the full scope of the role and benefits package.

Best regards,

Ogbonna Arinze
