Hiring Team
PiNCAMP | ADAC Camping GmbH
Berlin, Germany

Dear Hiring Team,

PiNCAMP is digitizing how millions of ADAC members discover and book camping across 14,500+ campgrounds in 44 countries, combining the trust of Europe's largest automobile club with the speed of a tech scale-up. Building the e-commerce platform behind that experience is exactly the kind of high-impact, performance-critical work I thrive on. I am applying for the Senior Fullstack Engineer (Travel E-Commerce) role, bringing 8 years of professional experience building production web applications with React, Next.js, GraphQL, and TypeScript.

At Genentech, I worked with GraphQL on the frontend, integrating data from multiple upstream systems into a React application while implementing JWT-based authentication, role-based access control, and React Query for efficient data fetching and caching. I optimized application performance through lazy loading, code splitting, and CDN-based asset delivery, using Lighthouse and Chrome DevTools to identify and resolve bottlenecks. I also architected a reusable design system in React and Radix UI that improved UI consistency and accessibility across products, and integrated Playwright end-to-end tests into the CI/CD pipeline with GitHub Actions and Allure Reports.

More recently, I built OurNigeria (ournigeria.ng) end-to-end as an Nx monorepo managing 6 applications with Next.js, NestJS, React 19, and Tailwind CSS v4. I implemented server-side rendering for public pages with SEO optimization (Open Graph metadata, JSON-LD schema, slug-based URLs), built 22 interactive chart types with Recharts, and configured Docker Compose production deployments with CI/CD via GitHub Actions and Playwright E2E tests. Earlier at Descasio, I drove a 40% improvement in React application performance by optimizing caching mechanisms, reduced bundle size by 30-40% through build analysis tooling, and established engineering standards for code quality and deployment across the team. Across multiple roles, I have mentored junior developers and contributed to architectural decisions, which aligns well with the technical leadership PiNCAMP is looking for.

I am excited about PiNCAMP's mission to make camping accessible and bookable at scale, and I would love to discuss how my fullstack experience with React, Next.js, GraphQL, and performance optimization can help the platform grow. I look forward to hearing from you.

Sincerely,

Ogbonna Arinze
