Hiring Team
Raisin GmbH
Berlin, Germany

Dear Hiring Team,

Raisin has turned a genuinely complex problem, giving everyday people transparent access to wealth-building products across borders, into a platform trusted by over one million investors managing more than €80 billion in assets. The Investment and Pension Products tribe sits at the heart of that mission, translating highly regulated capital markets products into experiences people can actually use. That intersection of financial complexity and frontend craft is exactly where I do my best work. I am applying for the Senior Software Engineer Frontend position to help the IPP tribe build the next generation of investment and pension interfaces.

I bring 8 years of professional experience building customer-facing web applications in React, Next.js, and TypeScript, with direct financial services exposure. At ActivEdge Technologies, I helped build a high-volume bank Settlement Solution processing millions of daily transactions, boosting settlement rates by 80%, and developed real-time data visualization dashboards with react-chartjs and Redux Toolkit. At Genentech (Roche), I architected a reusable design system in React and Radix UI focused on accessibility (WCAG) and developer velocity, integrated Playwright end-to-end tests into the CI/CD pipeline with automated Allure reporting, and co-developed a full-stack Next.js application powered by a RAG system. At Descasio, I reduced bundle sizes by 30-40% through systematic profiling with React Profiler and Lighthouse, achieving a 35% faster load time, and established engineering standards using ESLint, Prettier, Husky, and GitHub Actions to accelerate CI/CD processes.

Beyond technical execution, I have consistently mentored engineers and contributed to architecture decisions across every team I have joined. Raisin's "you build it, you run it" philosophy and cross-functional collaboration with Product, UX, and Risk teams align well with how I work. I am excited by the opportunity to bring my experience building performant, accessible, and well-tested frontend systems to a team that is making wealth management genuinely accessible across Europe and beyond.

I would welcome the chance to discuss how my background can contribute to the IPP tribe's goals. Thank you for your time and consideration.

Sincerely,

Ogbonna Arinze
