Hiring Manager
Trusted Shops GmbH
Cologne, Germany

Dear Hiring Manager,

Trusted Shops has spent over 25 years building Europe's trust infrastructure for e-commerce, and the "Human & Agentic Trust" team signals the next evolution: extending that trust layer to AI-driven interactions. That intersection of identity, authentication, and intelligent systems is exactly where my 8 years of fullstack experience converge, and I am excited to apply for the Senior Fullstack Engineer role on this team.

At Genentech (Roche), I implemented JWT-based authentication and role-based access control on the frontend, securely managing access and refresh tokens with HTTP-only cookies and collaborating with backend engineers on auth strategies. I also spearheaded a migration from a Vue.js application to a React Chrome extension embedded across clinical site systems, which directly parallels the cross-platform Web Component integrations Trusted Shops delivers to Shopware, PrestaShop, WooCommerce, Magento, and Shopify. On the AI side, I co-developed a full-stack Next.js chat widget powered by a RAG system using OpenAI GPT models, LangChain, Vercel AI SDK, and Chroma, designed as an embeddable component for external sites. More recently, on OurNigeria, I architected an Nx monorepo managing 6 applications with a NestJS backend, PostgreSQL with Prisma, RESTful APIs, and Docker Compose production deployment with Traefik, while building a multi-agent AI system with 5 specialized agents and a hybrid RAG pipeline, along with OTP authentication, Telegram OAuth, and session-based identity flows.

What draws me to this role specifically is the ownership culture. At every position I have held, from building e-commerce payment modules (MasterCard, VISA, Express-cash) at ActivEdge that boosted settlement rates by 80%, to establishing CI/CD pipelines with Playwright E2E tests and automated reporting at Genentech, I have operated with a "you build it, you own it" mindset. I would bring that same end-to-end ownership, combined with hands-on experience in Node.js, React, TypeScript, AWS, and authentication systems, to help Trusted Shops scale secure identity services for both human and agentic consumers.

I would welcome the opportunity to discuss how my experience building embeddable components, authentication systems, and AI-powered products can contribute to the Human & Agentic Trust team. Thank you for your time and consideration.

Sincerely,

Ogbonna Arinze
