Hiring Manager
fleetster
Krailling, Munich, Germany

Dear Hiring Manager,

fleetster's platform serving over 100,000 users across 28 countries in 9 languages is exactly the kind of high-impact, internationally scaled product I want to help build and modernize. I was particularly drawn to the fact that your engineering team is actively transitioning from Express to NestJS, because I recently architected a production NestJS backend from scratch for OurNigeria (ournigeria.ng), an Nx monorepo managing 6 applications with PostgreSQL, Docker Compose deployment, and comprehensive Playwright E2E testing. I understand the patterns, tradeoffs, and migration paths involved in that transition firsthand. I am applying for the Senior Full-Stack Engineer position with 8 years of professional experience spanning React, Redux, TypeScript, Node.js, NestJS, and MongoDB.

On the frontend, I bring deep React and Redux expertise across every role since 2019. At Genentech, I led the migration of a clinical trial data product from Vue.js to React, introduced Redux for state management, and integrated Playwright end-to-end tests into the CI/CD pipeline with automated Allure Reports. At Descasio, I drove a 25% boost in user engagement through a scalable React architecture and reduced bundle size by 30-40% using profiling and optimization tools. I also introduced Jest testing frameworks there, leading to a 20% decrease in bug reports. On the backend, my earlier roles at SureTrade and Founders Lair were grounded in Node.js and MongoDB, where I designed database schemas, built RESTful APIs, and deployed to AWS. This fullstack foundation, combined with my recent NestJS production work, maps directly to fleetster's tech stack.

Beyond the technical fit, I thrive in the kind of environment fleetster offers: a lean, international team where each engineer has real ownership and impact. I have consistently worked in small, agile teams (as small as 3 engineers at ActivEdge, where we built a bank settlement solution processing millions of daily transactions) and have mentored junior developers at three separate companies. I am comfortable investigating bug reports, supporting customer issues, and contributing to architecture decisions, not just writing features.

I would welcome the opportunity to discuss how my fullstack experience and NestJS migration knowledge can contribute to fleetster's architecture renewal and product growth. Thank you for considering my application.

Sincerely,

Ogbonna Arinze
