Lennard Greve
Sleak AI (Sleak GmbH)
Munich, Germany

Dear Lennard,

I'm reaching out about the Founding Engineer role at Sleak AI. What caught my attention is how you've turned AI-powered sales simulations into measurable outcomes, like the 46% performance increase Suxxeed saw across 80+ reps in just five weeks. Building conversational AI that actually changes how people sell, with real-time feedback, adaptive difficulty, and manager-level analytics, is exactly the kind of product challenge I want to spend my time on.

I'm a full-stack engineer with 8 years of experience, and my most relevant work maps directly to what you're building. Most recently, I architected OurNigeria from scratch as a solo engineer: an Nx monorepo with 6 applications (NestJS backend, three Next.js frontends, a document ingestion pipeline, and a video service), all backed by PostgreSQL with pgvector. The core of the platform is a multi-agent AI system I built using the Mastra framework, with 5 specialized agents, a hybrid RAG pipeline combining pgvector similarity search with BM25 full-text search, Cohere reranking, and SSE streaming for real-time conversational responses. At Genentech (Roche), I co-developed a full-stack Next.js chat widget powered by a RAG system using OpenAI GPT models, LangChain, Vercel AI SDK, and Chroma vector database, giving users a conversational interface to query their connected data sources in real time.

Beyond the AI and full-stack work, I bring the founding-engineer mindset you're looking for. I've established testing and code quality standards using Playwright, Jest, ESLint, and GitHub Actions across multiple teams. I've mentored junior engineers at three different companies. And I build with a product-first approach, from database schema design through polished UI, always oriented around what users actually need. Your stack (Next.js, Node.js, PostgreSQL, Azure) aligns closely with what I use daily, and Claude Code is already part of my workflow.

I'd love to discuss how my experience building conversational AI systems and shipping full products end-to-end can help Sleak AI scale its platform and define the category. I'm excited about the opportunity to shape the product, architecture, and engineering culture from day one.

Best regards,

Ogbonna Arinze
