Hiring Team
Vizzlo
Spinnereistraße 7, Hall 6
Leipzig, Germany

Dear Vizzlo Hiring Team,

Vizzlo is the only tool on the market that lets users create professional data visualizations directly inside Google Slides and PowerPoint, and I think that kind of seamless integration is what makes the product genuinely special. As a Frontend Engineer with 8 years of experience building interactive, data-driven applications in React and TypeScript, I would love to bring my data visualization expertise to the team and help build the next generation of Vizzards.

Data visualization has been a consistent thread throughout my career. At ActivEdge Technologies, I built dynamic data visualization dashboards using React and react-chartjs, rendering complex financial datasets into interactive charts for transaction monitoring and settlement tracking, all powered by Redux Toolkit and Ant Design. More recently, with OurNigeria (ournigeria.ng), I built a Next.js frontend featuring 22 interactive chart types with Recharts, including bar charts, line charts, pie charts, area charts, and treemaps, auto-generated from AI responses with responsive layouts. Both projects required translating raw numerical data into clear, interactive visual representations, which is exactly the challenge at the core of Vizzlo's product.

Beyond visualization, I bring deep experience in the areas your role demands. At Genentech, I architected a reusable design system in React and Radix UI, migrated a Vue.js application to a React Chrome extension with careful attention to cross-browser compatibility, and optimized performance through lazy loading, code splitting, and CDN asset delivery, all measured via Lighthouse and Chrome DevTools. At ActivEdge, I worked extensively with Ant Design as a UI toolkit and adopted the native EventSource API for real-time data streaming, building responsive interfaces that updated live transaction feeds. I am comfortable with mathematical concepts from working with charting coordinate systems, scaling algorithms, and data transformation pipelines across these projects.

Your description of Vizzlo's hands-on culture, where a small international team talks plainly and iterates until things are perfect, resonates with how I work best. I would welcome the opportunity to discuss how my visualization and frontend engineering experience can contribute to Vizzlo's mission.

Sincerely,

Ogbonna Arinze
