Veronika Gamper
Recruiting Team
WeDaVinci
Munich, Germany

Dear Hiring Team,

WeDaVinci's mission to help media companies generate fast, verifiable, and style-adaptive content through NLP-powered collaboration is exactly the kind of product I want to help build. Building AI systems that produce trustworthy, real-time content at scale requires deep fullstack expertise and genuine experience shipping LLM-powered products, and that is precisely where my 8 years of professional experience align. I am excited to apply for the Senior Fullstack Developer role.

At Genentech (Roche), as a Frontend Engineer, I co-developed a full-stack Next.js chat widget powered by a Retrieval-Augmented Generation system using OpenAI GPT models, LangChain, Vercel AI SDK, and Chroma vector database, enabling users to connect their data sources and query them in real time through a conversational interface. This experience building embeddable, AI-driven content tools maps directly to WeDaVinci's collaborative content generation platform. I also architected a reusable design system in React and Radix UI, and integrated Playwright end-to-end tests into the CI/CD pipeline, establishing the kind of frontend reliability and developer velocity a fast-growing product needs.

More recently, I architected OurNigeria (ournigeria.ng), a production AI platform where I built the entire system as an Nx monorepo managing 6 applications: NestJS API backend, multiple Next.js frontends, and a document ingestion pipeline. I designed a multi-agent AI system with 5 specialized agents and a hybrid RAG pipeline combining pgvector similarity search with BM25 full-text search across 708K+ vector embeddings, deployed via Docker Compose on AWS with GitHub Actions CI/CD. This project gave me end-to-end ownership of the full stack, from PostgreSQL schema design with Prisma, to real-time SSE streaming, to production Docker deployment with health checks and memory limits, exactly the kind of breadth a 1-10 person team needs from a senior engineer.

I thrive in small, fast-moving teams where I can own the full product lifecycle. I would love to discuss how my experience shipping production AI systems, building scalable React frontends, and designing robust backend APIs can help WeDaVinci scale its collaborative content platform for media companies.

Sincerely,

Ogbonna Arinze
