Hiring Team
1KOMMA5°
Berlin, Germany

Dear Hiring Team,

1KOMMA5°'s vision of connecting 1.5 million buildings to clean energy by 2030, powered by the Heartbeat AI platform that turns private households into Europe's largest virtual power plant, is exactly the kind of mission where strong full-stack engineering has outsized impact. With 8 years of professional experience building business-critical systems in TypeScript, React, Next.js, Node.js, and NestJS, I am excited to apply for the Senior Full-Stack Software Engineer position and contribute to the software that accelerates the energy transition.

Most recently, I architected and built OurNigeria, a full-stack platform managed as an Nx monorepo with 6 applications: a NestJS API backend, three Next.js frontends, a NestJS document ingestion pipeline, and a video generation service. I owned the entire stack end-to-end, from PostgreSQL database design with Prisma to responsive React 19 frontends with 22 interactive chart types, CI/CD with GitHub Actions, and Docker Compose production deployment with health checks and graceful shutdown. This experience maps directly to your need for engineers who can translate complex business problems into technical solutions across the full stack.

At Genentech (Roche), I spearheaded the migration of a clinical trial data product from Vue.js to React, architected a reusable design system with React and Radix UI that improved UI consistency and accessibility across products, and co-developed a full-stack Next.js chat widget powered by a RAG system using OpenAI, LangChain, and Chroma. I also drove frontend performance optimization through lazy loading, code splitting, and CDN delivery, and integrated Playwright end-to-end tests into the CI/CD pipeline with automated Allure reporting. At Descasio, I reduced bundle size by 30-40% and achieved 35% faster load times through systematic profiling, while establishing engineering standards for code quality using ESLint, Prettier, and GitHub Actions.

I thrive in autonomous, outcome-oriented environments and am passionate about reducing technical debt while championing clean architecture. I would welcome the opportunity to discuss how my full-stack expertise can help 1KOMMA5° scale its platform and bring clean energy to more households across Europe.

Sincerely,

Ogbonna Arinze
