Re: Senior Frontend Engineer (TypeScript & React)

Dear Daria,

Finanzcheck's position as one of Germany's leading loan comparison platforms, helping over 300,000 customers find better credit terms across 20+ partner banks, is exactly the kind of high-traffic, consumer-facing product I thrive on. Your "you build it, you run it, you own it" philosophy and autonomous, cross-functional team structure mirror how I've worked across my 8 years of professional experience building performance-critical React applications in fintech, healthcare, and enterprise environments.

My most directly relevant experience comes from ActivEdge Technologies, where I served as Senior React Developer building a high-volume bank Settlement Solution that processed thousands to millions of daily transactions, boosting settlement rates by 80%. I developed payment processing modules for MasterCard, VISA, Express-cash, and E-commerce using React with Redux and RxJS, and adopted the EventSource API for real-time data streaming to deliver a faster, more responsive interface for financial institution clients. This experience building data-intensive, high-traffic fintech frontends aligns closely with what Finanzcheck needs for its loan comparison platform.

Currently at Genentech (Roche), I work as a Frontend Engineer where I've architected a reusable design system in React and Radix UI with WCAG accessibility compliance, optimized application performance through lazy loading, code splitting, and CDN asset delivery measured via Lighthouse, and implemented JWT-based authentication with role-based access control in Next.js with TypeScript. I've also integrated Playwright end-to-end tests into the CI/CD pipeline for release reliability. On the performance optimization side, at Descasio I reduced bundle sizes by 30-40% through systematic profiling with React Profiler, rollup-plugin-visualizer, and webpack-bundle-analyzer, achieving 35% faster load times and a 40% improvement in overall application performance through optimized caching.

I'm excited about the opportunity to bring this combination of fintech domain experience, performance engineering, and frontend-backend API integration expertise to Finanzcheck's Berlin team. I would welcome the chance to discuss how I can contribute to building high-converting, accessible frontends that help more German consumers find better loan terms.

Best regards,

Ogbonna Arinze
