Hiring Team
PHONT
Berlin, Germany

Dear Hiring Team,

The idea of making subtitles convey emotion, not just words, is a genuinely exciting design challenge. PHONT sits at a fascinating intersection of audio analysis and real-time visual animation, and I would love to help architect the production-grade Next.js application that brings that vision to users at scale. I am applying for the Lead Fullstack Engineer (React/Next.js) position.

I bring 8 years of professional experience building high-performance web applications with React, Next.js, and TypeScript across healthcare, fintech, and civic tech. At Genentech (Roche), I spearheaded the migration of a clinical trial data product from Vue.js to React, architected a reusable design system with React and Radix UI, and co-developed a full-stack Next.js chat widget powered by a RAG system using OpenAI, LangChain, and Vercel AI SDK. I also implemented JWT-based authentication with role-based access control, integrated Playwright end-to-end tests into the CI/CD pipeline with automated Allure reporting, and mentored two junior developers. More recently, I architected OurNigeria, an AI-powered platform built as an Nx monorepo managing 6 applications, including a NestJS API backend and multiple Next.js frontends, with SSE streaming for real-time data delivery, PostgreSQL with Prisma, Docker Compose production deployment, and CI/CD via GitHub Actions.

What makes me a strong fit for PHONT specifically is my depth across the entire stack you need. I have hands-on experience with real-time data streaming (SSE at OurNigeria, EventSource API at ActivEdge for processing millions of daily transactions), building animation-ready frontends with modern React patterns, establishing CI/CD infrastructure from scratch, and interfacing with backend services in Python-heavy environments. At Descasio, I reduced bundle sizes by 30-40% and improved load times by 35% through systematic performance profiling, the kind of optimization critical for low-latency subtitle rendering. I also have experience leading technical decisions and mentoring engineers across multiple roles.

I would welcome the opportunity to discuss how my experience architecting production systems, building real-time interfaces, and leading technical teams can help PHONT scale from prototype to product. I am based in Germany and available for remote or hybrid work.

Sincerely,

Ogbonna Arinze
