Superchat Hiring Team
Berlin, Germany

Dear Hiring Team,

Superchat's approach to unifying customer communication across WhatsApp, Instagram, and every other channel into a single, intuitive inbox is exactly the kind of product challenge I find most rewarding: complex real-time data, multiple integration surfaces, and a direct impact on how 9,000+ businesses interact with their customers daily. I am excited to apply for the (Senior) Frontend Engineer position and bring 8 years of experience building scalable React and TypeScript applications to your team.

At Genentech (Roche), I serve as a Frontend Engineer where I led the migration of a clinical trial data product from Vue.js to React with TypeScript, taking full ownership from architecture through deployment. I introduced React Query for server-state caching and request deduplication, architected a reusable design system with Radix UI and Tailwind CSS that improved UI consistency and accessibility (WCAG) across product teams, and integrated Playwright end-to-end tests into the CI/CD pipeline via GitHub Actions. This mirrors the kind of work Superchat needs: building and maintaining mid-to-large-scale web applications with modern tooling, strong UX sensibility, and cross-functional collaboration with backend engineers and designers.

Previously, as Senior Frontend Developer at Descasio, I led the design and implementation of a React user interface that achieved a 25% boost in user engagement, optimized frontend performance by reducing bundle size by 30-40% through profiling with React Profiler and Lighthouse, and documented components in Storybook to streamline change management across the team. I also established engineering standards with ESLint, Prettier, and GitHub Actions, and mentored junior engineers on frontend best practices. On my own time, I recently architected OurNigeria (ournigeria.ng), an Nx monorepo managing 3 Next.js frontends with React 19, TypeScript, Tailwind CSS v4, and Playwright E2E tests, which shows my comfort with the exact stack Superchat uses.

I am particularly drawn to Superchat's product-driven engineering culture with full feature ownership, and your well-tooled environment with Sentry, Datadog, and feature flags. I have worked with Sentry and Datadog RUM in production and thrive in environments where engineers own their features end-to-end. I would love to discuss how my experience can contribute to Superchat's mission of making business communication effortless.

Warm regards,

Ogbonna Arinze
