Hiring Team
Kadmos
Berlin, Germany

Dear Hiring Team,

With eight years of full-stack engineering experience building secure, high-volume financial transaction systems and regulated healthcare platforms, I am excited to apply for the Senior Full-Stack Engineer position at Kadmos. As a Berlin-based engineer, I am deeply inspired by your mission to revolutionize salary payments for migrant workers in the shipping industry. Bringing transparency and low margins to an opaque sector requires incredibly robust, scalable financial infrastructure, and I am eager to contribute my expertise in React, TypeScript, and backend service architecture to help drive this innovation.

Building reliable systems in a financial services context demands rigorous attention to security and scale. During my tenure as a Senior React Developer at ActivEdge Technologies, I played a pivotal role in building a high-volume bank Settlement Solution that processed thousands to millions of transactions daily. By implementing MasterCard, VISA, and e-commerce modules, and optimizing real-time data streaming with the native EventSource API, we boosted transaction settlement rates by 80% and boosted reconciliation of daily transactions by 60%. Furthermore, at Genentech, I navigated a highly regulated environment by implementing secure JWT-based authentication with HTTP-only cookies and role-based access controls, coordinating closely with backend teams to enforce strict permission models. While my recent backend expertise centers on Node.js and NestJS, I have a proven track record of architecting scalable, testable REST APIs and backend services, such as the suite of applications I recently orchestrated in an Nx monorepo for a civic data platform.

On the frontend, I bring deep expertise in the exact stack Kadmos relies on. At Genentech, I standardized our state management and data fetching using Redux and React Query, refactoring legacy code into modern, performant React components. I am also a strong advocate for automated testing to ensure reliability in critical applications. At Descasio, I introduced Jest and Enzyme to our workflow, which directly led to a 20% decrease in bug reports. More recently, I have driven end-to-end testing using Playwright within GitHub Actions CI/CD pipelines, ensuring that complex UIs remain stable across deployments.

I am drawn to Kadmos's ambitious goals and the technical challenges of building transparent FX and salary payment solutions. I have attached my resume and would welcome the opportunity to discuss how my background in full-stack development and financial systems can support your engineering team.

Sincerely,

Ogbonna Arinze
