Hiring Team
QuantCo
Berlin, Germany

Dear Hiring Team,

With over 8 years of experience building complex React and TypeScript applications, I am excited to apply for the Frontend Software Engineer position at QuantCo. As a Berlin-based engineer, I am drawn to QuantCo's mission of translating frontier AI and statistical learning into measurable, real-world impact. The challenge of designing intuitive human-computer interactions for high-dimensional forecasting and algorithmic pricing perfectly aligns with my recent work building end-to-end user interfaces for AI-assisted systems.

At Genentech, I co-developed a full-stack Next.js chat widget backed by a Retrieval-Augmented Generation (RAG) stack using OpenAI GPT models, LangChain, and Chroma. This required tackling unique UX challenges to let users seamlessly connect data sources and query them through a conversational interface. More recently, I architected and built OurNigeria, an AI-powered civic platform, from ideation to production. Operating within an Nx monorepo, I designed the Next.js citizen-facing frontend and the NestJS backend-for-frontend, integrating a multi-agent system that processes over 708K vector chunks. I implemented SSE streaming for real-time chat responses and built interactive chart types using Recharts to make complex data instantly understandable for users.

QuantCo's focus on production-ready, effective code resonates with my engineering philosophy. As a Senior Frontend Developer at Descasio, I led the delivery of a React UI that drove a 25% increase in user engagement. I took deep ownership of the application's performance, reducing bundle sizes by 30-40% using webpack-bundle-analyzer and achieving 35% faster load times by resolving render bottlenecks with React Profiler and Lighthouse. Furthermore, I consistently advocate for robust testing, having established Playwright end-to-end suites in CI/CD at Genentech and Jest/Enzyme workflows at Descasio that reduced bug reports by 20%.

I thrive in agile, cross-functional environments where I can collaborate closely with data scientists and backend engineers to iterate rapidly on greenfield projects. I have attached my resume and would welcome the opportunity to discuss how my frontend expertise and drive for building exceptional AI interfaces can contribute to QuantCo's solutions.

Sincerely,

Ogbonna Arinze
