Hiring Team
Sonia
Berlin, Germany

Dear Hiring Team,

Sonia's mission to make doctors successful through AI-enhanced tools resonates deeply with me. Having spent nearly three years at Genentech (Roche) building clinical data platforms that connect trial sites to EHR systems, I understand firsthand how thoughtful engineering can remove friction from healthcare workflows and let practitioners focus on what matters most. I am excited to apply for the Lead Full-Stack Engineer (TypeScript) position, where I can bring 8 years of full-stack development experience and a genuine passion for healthcare technology to your engineering team.

My technical background aligns closely with Sonia's stack and needs. As a Frontend Engineer at Genentech, I spearheaded a product migration from Vue.js to React with TypeScript, architected a reusable design system with Radix UI, and integrated Playwright end-to-end tests into our CI/CD pipeline with GitHub Actions, significantly improving release reliability. More recently, I architected OurNigeria (ournigeria.ng) as an Nx monorepo managing 6 applications, where I designed the PostgreSQL database schema with Prisma v7, built NestJS RESTful APIs with role-based access control, and configured Docker Compose production deployments. This combination of hands-on React and TypeScript frontend work with backend API design, Prisma ORM, and database modeling directly maps to what your team is building.

Beyond code, I bring proven leadership experience. I have mentored junior engineers and interns across multiple roles, established engineering standards for code quality and CI/CD at Descasio (reducing bug reports by 20% through testing frameworks), and collaborated with architects on scalable frontend architecture that accelerated development by 30%. I value the kind of engineering culture Sonia is building, one rooted in learning, pragmatism, and ownership, and I am eager to foster growth, clarity, and high performance within a full-stack team while continuing to contribute hands-on as a lead.

I would welcome the opportunity to discuss how my healthcare engineering background, full-stack TypeScript expertise, and team leadership experience can contribute to Sonia's mission. Thank you for your consideration.

Sincerely,

Ogbonna Arinze
