Recruiting Team
goodBytz GmbH
Werner-Otto-Straße 13g
22179 Hamburg, Germany

Dear Hiring Team,

The idea of building the interfaces that let people order meals prepared by autonomous robotic kitchens is genuinely exciting to me. goodBytz sits at a rare intersection of robotics, IoT, and consumer-facing software, and the Senior Frontend Engineer role is exactly where my 8 years of frontend experience, real-time protocol expertise, and B2B/B2C product background converge. I want to help translate your operational concepts into the intuitive, high-performance interfaces that make autonomous food systems feel effortless to every user.

At Genentech (Roche), I serve as a Frontend Engineer building React and TypeScript applications for a clinical trial data platform. I spearheaded a major product redesign migrating from Vue.js to React, architected a reusable design system with Radix UI and Tailwind CSS for consistency and accessibility across multiple product teams, and optimized load times through lazy loading, code splitting, and CDN delivery, all measured via Lighthouse. I also integrated Playwright end-to-end tests into the CI/CD pipeline with automated Allure Reports, and mentored two junior developers. What makes my background particularly relevant to goodBytz is my hands-on experience with real-time communication protocols. At ActivEdge Technologies, I adopted the native EventSource API (SSE) to replace socket.io for streaming live transaction data in a bank settlement solution processing millions of daily transactions, boosting settlement rates by 80%. More recently, I implemented SSE streaming with keepalive heartbeats for a Next.js platform I built from scratch, handling real-time chat responses across responsive mobile and desktop layouts. This direct experience with SSE and EventSource maps closely to the live communication protocols (SSE, WebSockets, MQTT) central to your robotic kitchen integrations.

Beyond real-time systems, I bring strong cross-functional collaboration and a bias for shipping. At Descasio, I led a React frontend that achieved a 25% boost in user engagement, reduced bundle size by 30-40% through performance profiling, and established engineering standards (ESLint, Prettier, CI/CD) that accelerated development by 30%. Across multiple roles, I have consistently mentored junior engineers, which aligns with your expectation for senior-level leadership. I am comfortable working across B2B internal tools and B2C consumer-facing products, having built both throughout my career.

I would welcome the opportunity to discuss how my experience with React, real-time protocols, performance optimization, and cross-functional collaboration can contribute to goodBytz's mission. Thank you for your time and consideration.

Sincerely,

Ogbonna Arinze
