Hiring Team
JAKALA
Hamburg / Berlin, Germany

Dear Hiring Team,

JAKALA's position at the intersection of data, AI, and digital experience platforms is what drew me to the Senior Frontend Developer (React) role. Building customer platforms that weave together personalization, analytics, and content management is exactly the kind of work I've spent 8 years refining, and the opportunity to do it within product-oriented squads at a company with 3,200 people across Europe is compelling.

As a Frontend Engineer at Genentech (Roche), I architected a reusable design system in React and Radix UI with Tailwind CSS that improved UI consistency, accessibility (WCAG), and developer velocity across multiple product teams. I optimized application performance through lazy loading, code splitting, and CDN asset delivery via AWS CloudFront, measuring results with Lighthouse and Chrome DevTools. I also co-developed a full-stack Next.js application with TypeScript, implementing JWT-based authentication, role-based access control, and React Query for efficient data fetching. Clean Code practices and automated quality were central to my work: I integrated Playwright end-to-end tests into our CI/CD pipeline with GitHub Actions and mentored junior developers on code quality standards.

Earlier, as Senior Frontend Developer at Descasio, I led the design of a scalable React frontend architecture that achieved a 25% boost in user engagement and accelerated development by 30%. I established Clean Code engineering standards using ESLint, Prettier, Husky, and Lint-staged, and reduced bundle sizes by 30-40% through systematic performance profiling with React Profiler and Lighthouse. I used Storybook for component documentation and supported agile delivery through sprint planning and estimation. More recently, I built three Next.js frontends for OurNigeria (ournigeria.ng), implementing SSR-based SEO optimization with Open Graph metadata, JSON-LD schema, and slug-based URLs, which directly maps to the SEO, analytics, and content integration work this role requires.

I'm excited about working with JAKALA's teams to build innovative customer platforms with React and Next.js, contributing to design systems, integrating AWS cloud services and headless CMS content, and ensuring high code quality across diverse client projects. I would welcome the chance to discuss how my experience can contribute to your product teams.

Sincerely,

Ogbonna Arinze
