Hiring Manager
HiveMQ GmbH
Berlin, Germany

Dear Hiring Manager,

HiveMQ's platform turns millions of IoT data points into actionable intelligence for companies like BMW, Siemens, and Eli Lilly, and the quality of the Control Center's UI directly shapes how confidently engineers manage that data at scale. That intersection of complex, real-time data and intuitive frontend experience is exactly where I thrive. With 8 years of professional experience architecting modern web frontends in React and TypeScript, I would love to bring that expertise to HiveMQ as your next Senior Frontend Engineer.

At Genentech (Roche), I architected a reusable design system in React and Radix UI with Tailwind CSS that established company-wide UI standards, improving consistency, WCAG accessibility, and developer velocity across multiple product teams. I implemented JWT-based authentication and role-based access control with secure HTTP-only cookie handling, built comprehensive Playwright end-to-end test suites integrated into the CI/CD pipeline via GitHub Actions, and optimized application performance through code splitting, lazy loading, and CDN asset delivery, measured via Lighthouse and Chrome DevTools. Earlier at ActivEdge Technologies, I built real-time data visualization dashboards for a high-volume bank settlement solution processing millions of daily transactions, using React with Redux, RxJS for reactive data streaming, and the native EventSource API for live data updates, boosting settlement rates by 80%. This experience with real-time streaming interfaces and complex data visualization translates directly to the kind of reactive, data-rich UIs that HiveMQ's platform demands.

Beyond deep frontend expertise, I bring strong build tooling knowledge (Webpack, Rollup, bundle analysis), a testing-first mindset (Jest, Enzyme, Playwright, Cypress), and hands-on AI-assisted development experience, having co-developed a RAG-powered chat widget using OpenAI, LangChain, and Chroma at Genentech. I am genuinely excited about learning MQTT and distributed systems, and I am confident that my experience building high-quality, performant frontends for enterprise platforms, combined with my collaborative approach and commitment to engineering standards, would make me a strong contributor to HiveMQ's product team.

I would welcome the opportunity to discuss how my experience can help HiveMQ deliver a simple, intuitive, and world-class UI/UX for your platform products. Thank you for your consideration.

Sincerely,

Ogbonna Arinze
