Hiring Team
Natuvion GmbH
Berlin, Germany

Dear Hiring Team,

Natuvion's mission to help enterprises move their most critical data to modern platforms resonates with the kind of engineering I find most rewarding: building robust, well-architected systems that handle real complexity under the surface. I am applying for the Senior Full-Stack Software Engineer (Next / React / TypeScript) role because the challenges you describe, planning full-stack features across the Natuvion Cloud Platform, defining clear client/server boundaries in Next.js, and building reusable components within a monorepo, are exactly the problems I have spent my last 8 years solving.

Most recently, I architected the entire platform for OurNigeria (ournigeria.ng) as an Nx monorepo managing 6 applications with pnpm workspaces, including multiple Next.js frontends and NestJS backends sharing reusable components, services, and utilities across all projects. I designed the PostgreSQL database schema with Prisma v7 for type-safe access across the backend, implemented server-side rendering for public pages, and defined clear architectural boundaries between client and server responsibilities. At Genentech (Roche), I co-developed a full-stack Next.js chat widget where I owned both the client-side React UI and the server-side data retrieval layer, collaborating closely with backend engineers on API contracts. I also architected a reusable design system in React and Radix UI that improved consistency and developer velocity across multiple product teams, and conducted structured code reviews to maintain architectural quality.

What draws me specifically to Natuvion, beyond the technical fit, is your emphasis on curiosity and continuous architectural improvement. Throughout my career I have consistently driven standardization, from establishing engineering-wide code quality standards with ESLint, Prettier, and CI/CD pipelines at Descasio, to integrating Playwright end-to-end testing into the release workflow at Genentech. I thrive in environments where engineers are expected to shape processes and raise the bar, not just ship features. I would welcome the opportunity to discuss how my experience with full-stack Next.js development, monorepo architecture, and type-safe integrations can contribute to the Natuvion Cloud Platform.

Sincerely,

Ogbonna Arinze
