Hiring Team
TechMiners GmbH
Berlin, Germany

Dear Hiring Team,

TechMiners is building automated machinery for M&A due diligence, and what excites me most about the Senior Product Engineer role is the conviction that AI should be a core development tool, not an afterthought. I share that conviction. Over the past year, I have built and shipped a production multi-agent AI system with 5 specialized agents, a hybrid RAG pipeline processing 708K+ vector embeddings, and full database-to-React-UI product ownership, and I use Claude Code daily as a core part of my development workflow. With 8 years of professional engineering experience and a deep product focus, I would love to bring that same AI-native approach to building TechMiners ONE.

Most recently, I architected OurNigeria (ournigeria.ng), an AI-powered civic platform where I own every layer of the stack: PostgreSQL 16 database design with Prisma, NestJS API backend, a multi-agent system using Mastra with three-stage intent classification and hybrid RAG (pgvector + BM25 + Cohere reranking), and a Next.js + React frontend with 22 interactive chart types. The platform manages 6 applications in an Nx monorepo with Docker Compose production deployment, Playwright E2E tests, and Langfuse for LLM observability. This is the kind of end-to-end product engineering, from database schema to user-facing UI with AI deeply integrated, that the Senior Product Engineer role demands.

At Genentech (Roche), as a Frontend Engineer, I co-developed a full-stack Next.js chat widget powered by a RAG system using OpenAI GPT models, LangChain, Vercel AI SDK, and Chroma, giving users a conversational interface to query their clinical data in real time. I also spearheaded the redesign of the main product from Vue.js to a React Chrome extension, implemented JWT-based authentication with role-based access control, and integrated Playwright end-to-end tests into the CI/CD pipeline. Throughout my career, I have consistently translated business requirements into technical solutions, whether building a bank settlement system that boosted transaction settlement rates by 80% at ActivEdge Technologies or designing database schemas and NodeJS REST APIs at earlier roles.

I am eager to discuss how my experience building AI-native products from the ground up, combined with strong React and fullstack capabilities, can accelerate TechMiners' mission. Thank you for your time and consideration.

Sincerely,

Ogbonna Arinze
