Hiring Manager
Amber (Ambersearch)
Cologne, Germany

Dear Hiring Manager,

Amber's mission to make internal knowledge instantly accessible, especially as European businesses face the dual challenge of doubling data volumes and millions of retiring skilled workers, is a problem I have spent significant time solving with production AI systems. Your product suite, amberSearch, amberAI, and amberAgents, maps closely to the kind of architecture I have designed and shipped: enterprise RAG pipelines, conversational AI interfaces, and multi-agent systems that transform unstructured data into actionable intelligence. I am applying for the Staff Engineer position because this is exactly the intersection of system architecture, AI product engineering, and technical leadership where I do my strongest work.

Over 8 years of professional experience, I have consistently designed technical architecture for products serving thousands of daily users and guided teams through the complex decisions that come with scaling them. At Genentech (Roche), as a Frontend Engineer, I co-developed a full-stack Next.js chat widget powered by a RAG system using OpenAI GPT models, LangChain, Vercel AI SDK, and Chroma vector database, enabling users to connect their data sources and query them in real time via a conversational interface. I also architected a reusable design system in React and Radix UI that set organizational standards for UI consistency and accessibility across multiple product teams, and integrated Playwright end-to-end tests into the CI/CD pipeline to increase release reliability. More recently, I architected OurNigeria (ournigeria.ng), an AI-powered civic platform, as an Nx monorepo managing 6 applications. I designed and built a multi-agent AI system with 5 specialized agents powered by a hybrid RAG pipeline combining pgvector similarity search with BM25 full-text search and Cohere reranking over 708K+ vector embeddings, processing 700+ documents with zero ingestion errors.

Beyond hands-on architecture, I have a consistent track record of the technical leadership this role demands. At Descasio as Senior Frontend Developer, I established organizational engineering standards using ESLint, Prettier, Husky, and GitHub Actions, and drove a 40% improvement in application performance through systematic optimization. At ActivEdge Technologies, I architected a bank settlement system handling thousands to millions of daily transactions, boosting settlement rates by 80%. Across every role, I have mentored engineers, from guiding interns at Genentech and Founders Lair to coaching junior developers at Descasio, and I thrive in cross-functional collaboration with product, design, and stakeholders.

I would welcome the opportunity to discuss how my experience architecting scalable AI-powered systems, setting engineering standards, and mentoring teams can contribute to Amber's growth as Europe's leading Business AI. Thank you for your consideration.

Sincerely,

Ogbonna Arinze
