Hiring Team
Glorya GmbH
Berlin-Mitte, Germany

Dear Hiring Team,

Glorya's vision of building AI Marketing Agents that bring enterprise-level campaign optimization to small businesses resonates deeply with me. The challenge of translating AI research into production systems that deliver real business outcomes, on the exact stack I work with daily (Next.js, TypeScript, PostgreSQL), is precisely the kind of problem I thrive on. I would love to join as your Technical Lead (Full-Stack) and help scale that foundation.

I bring 8 years of professional experience architecting and shipping full-stack applications, with a particular focus on building AI-powered products from the ground up. Most recently, I independently designed and built OurNigeria (ournigeria.ng), an AI-powered civic platform where I own the entire stack: an Nx monorepo managing 6 applications built with NestJS, Next.js, and PostgreSQL 16 with pgvector. I implemented a multi-agent AI system with 5 specialized agents, a hybrid RAG pipeline processing 708K+ vector embeddings, and SSE streaming for real-time responses. This is the kind of full-ownership, conception-to-deployment work your role demands, and I did it on the exact technologies Glorya uses.

At Genentech (Roche), as a Frontend Engineer, I co-developed a full-stack Next.js chat widget powered by a RAG system using OpenAI GPT models, LangChain, and Chroma, giving me direct experience shipping AI features into production at enterprise scale. I also built third-party API integrations, implemented JWT-based authentication with role-based access control, and established CI/CD pipelines with Playwright end-to-end testing, all patterns directly applicable to building and maintaining Glorya's advertising platform integrations with Meta, Google, and TikTok.

Beyond technical execution, I bring the startup mentality and leadership your team needs. I have mentored junior developers across multiple roles, established engineering standards and testing practices that reduced bug reports by 20% at Descasio, and consistently worked in small, fast-moving teams where ownership and speed matter more than process. I am comfortable with ambiguity, I communicate through writing first, and I care deeply about minimizing technical debt while shipping quickly.

I would welcome the opportunity to discuss how my experience building production AI systems on Next.js, TypeScript, and PostgreSQL can accelerate Glorya's growth. I look forward to hearing from you.

Sincerely,

Ogbonna Arinze
