SUMMARY

Senior Frontend Engineer with 8 years of experience shipping high-velocity, customer-facing applications across fintech, healthcare, and AI platforms. Deep expertise in **TypeScript**, **React**, **Next.js**, and modern state management (**Redux**, **React Query**, **Zustand**), with hands-on ownership of **Nx + pnpm monorepos** spanning multiple production apps. Proven fintech track record at ActivEdge, where I built a bank settlement platform processing millions of daily transactions with real-time streaming over **EventSource**. Comfortable owning code quality long-term: **CI/CD** with GitHub Actions, **Playwright** end-to-end testing (including mobile viewport suites), bundle and render profiling, and observability with **Sentry** and **Langfuse**.

CORE COMPETENCIES

- **Languages & Type Safety:** TypeScript, JavaScript (ESNext), strict typing, zod schema validation, immer-style immutable patterns.
- **Frontend Frameworks:** React, React 19, Next.js (SSR/SSG/ISR), Vue.js, HTML, CSS, responsive and mobile-first layouts.
- **State Management & Data Fetching:** Redux, Redux Toolkit, React Query (TanStack Query), Zustand, Jotai, RxJS, Context API, REST and GraphQL API integration.
- **Real-Time & Networking:** Server-Sent Events (SSE), native EventSource API, WebSocket patterns, streaming responses with keepalive heartbeats.
- **UI & Component Libraries:** Tailwind CSS, Radix UI, Ant Design, Storybook, custom design systems, WCAG/ARIA accessibility, Figma-to-code workflows.
- **Monorepo & Build Tooling:** Nx, pnpm workspaces, Turborepo, Vite, Webpack, Rollup, bundle analysis (rollup-plugin-visualizer, webpack-bundle-analyzer).
- **Testing & Quality:** Playwright (web auth, dashboard auth, desktop Chrome, mobile Pixel 5 projects), Jest, Cypress, Enzyme, Allure Reports, ESLint, Prettier, Husky, Lint-staged.
- **CI/CD & Infrastructure:** GitHub Actions, Docker / Docker Compose, AWS (CloudFront, S3), Vercel, Heroku, multi-stage builds, health checks, automated PR pipelines.
- **Observability & Performance:** Sentry, Datadog RUM, LogRocket, Langfuse, Lighthouse, Chrome DevTools, React Profiler, Core Web Vitals, code splitting, lazy loading, memoization, CDN delivery.
- **Collaboration:** Agile/Scrum/Kanban, technical architecture reviews, mentorship, cross-functional work with Product, Design, and Backend.

WORK EXPERIENCE

Genentech (Roche) — San Francisco, CA (Remote)
Frontend Engineer — *May 2023 - Present*

- Spearheaded the redesign of the main clinical trial data product, migrating a **Vue.js** web application to a **React** Chrome extension in **TypeScript**, owning architecture, implementation, testing, and deployment end-to-end.
- Introduced **Redux** for application state and **React Query** (TanStack Query) for server-state caching, deduplication, and background refetching, replacing ad-hoc fetch calls and stabilizing data flow across the extension.
- Implemented **JWT-based authentication** with HTTP-only cookies, role-based access control, protected client-side routes, and seamless silent token refresh, partnering with backend engineers on the contract for **RESTful APIs**.
- Co-developed a full-stack **Next.js** chat widget powered by a Retrieval-Augmented Generation system using OpenAI GPT models, LangChain, Vercel AI SDK, and Chroma vector database, embeddable on external sites and queryable through a conversational interface.
- Architected a reusable **design system** in React, **Radix UI**, and **Tailwind CSS**, improving UI consistency, accessibility (WCAG/ARIA), and developer velocity across product teams.
- Optimized application performance via lazy loading, code splitting, dynamic imports, memoization, and CDN-backed asset delivery, validated with **Lighthouse** and Chrome DevTools profiling.
- Hardened release reliability by integrating **Playwright** end-to-end tests into the **GitHub Actions CI/CD pipeline**, publishing Allure Reports to GitHub Pages and wiring Slack notifications with run links on every push.
- Refactored legacy class components to typed functional components with hooks, reducing surface area for bugs and aligning the codebase with modern React conventions.
- Mentored two junior developers (interns) through code reviews and pair programming, raising the team's bar on TypeScript discipline and test coverage.

Descasio — Lagos, Nigeria (Hybrid)
Senior Frontend Developer — *May 2021 - Mar 2023*

- Led the design and implementation of an intuitive **React** + **TypeScript** user interface, achieving a **25% boost** in user engagement and collaborating with software architects on a scalable frontend architecture that accelerated delivery by **30%**.
- Drove a **40% improvement** in React application performance by tuning caching strategies, optimizing memoization, and refining data fetching patterns across the product.
- Reduced bundle size by **30-40%** and load time by **35%** by profiling render bottlenecks with **React Profiler** and **Lighthouse**, then dissecting bundles with **rollup-plugin-visualizer** and **webpack-bundle-analyzer**.
- Introduced **Jest** and **Enzyme** as the project's testing baseline, contributing to a **20% decrease** in bug reports and giving the team a safety net for refactors.
- Standardized component documentation with **Storybook**, streamlining change management and giving Product and Design a single source of truth for UI primitives.
- Established engineering standards using **ESLint**, **Prettier**, **Husky**, **Lint-staged**, and **GitHub Actions**, reducing review churn and accelerating CI/CD throughput.
- Used **Zustand** alongside Redux for lightweight client state where global stores added unnecessary boilerplate, picking the right state tool per feature.
- Mentored junior engineers on React idioms, TypeScript, and code review etiquette, reinforcing a culture of maintainable, well-tested code.

ActivEdge Technologies Lagos, Nigeria
Senior React Developer *Oct 2019 - Sep 2021*

- Built a high-volume **bank Settlement Solution** in a team of 3 frontend engineers, processing thousands to millions of daily financial transactions and boosting settlement rates by **80%**, a fintech workload directly analogous to retail trading scale.
- Developed critical payment modules (**MasterCard, VISA, Express-cash, E-commerce**) using **React** with **Redux** for state management, **RxJS** for data streaming, and **Axios** for asynchronous **REST API** integration.
- Adopted the native **EventSource API** for real-time data streaming, replacing socket.io to deliver faster updates and a more responsive interface across the settlement platform, the same real-time pattern that powers modern trading dashboards.
- Engineered a real-time account reconciliation solution that lifted daily transaction reconciliation by **60%** through smarter event handling and data normalization on the client.
- Built dynamic **data visualization dashboards** with **React** and **react-chartjs**, layering role management on top of **Redux Toolkit** and **Ant Design** components.

Founders Lair Beijing, China (Remote)
Full Stack Engineer (Contract) *Oct 2020 - Feb 2021*

- Translated business requirements into database models and schemas, partnering with the product team to ensure technical decisions mapped to real customer needs.
- Built **NodeJS RESTful APIs** with a focus on testability, maintainability, and clear documentation, then connected them to a **React** frontend assembled from Figma designs.
- Engineered a **CI/CD pipeline** for automated deployment of APIs to testing environments on **Heroku** and production servers on **AWS**, removing manual release toil.
- Mentored two interns across frontend and backend tasks, providing structured task breakdowns, code reviews, and pair programming.

SureTrade Business Solutions Nigeria
Frontend Developer *Mar 2018 - Oct 2019*

- Shipped **SureEdu**, a school management portal, in a team of 5, covering staff payroll and attendance, student records (exams, reports, attendance), and guardian communications.
- Designed **MongoDB** schemas and implemented server-side logic in **NodeJS**, building and testing REST endpoints powering multiple client-facing applications.
- Integrated the **JavaScript** frontend with NodeJS services, translating user use cases into models, schemas, and API contracts.
- Produced application documentation and exercised user-defined functions, triggers, and API endpoints to harden reliability before release.

PROJECTS

OurNigeria ournigeria.ng
Senior Engineer *Feb 2026 - Present*

AI-powered civic tech platform for Nigerian budget analysis. 700+ budget documents, 708K+ vector embeddings, 37 states.

- Architected the entire product as an **Nx monorepo** with **pnpm workspaces** orchestrating **6 applications** (NestJS API, Next.js citizen web, Next.js admin dashboard, NestJS ingestion pipeline, Next.js marketing site, Remotion video service), mirroring the kind of cross-platform monorepo Trading 212 is building.
- Built the citizen-facing frontend in **React 19**, **TypeScript**, and **Tailwind CSS v4**, with **22 interactive Recharts chart types** auto-generated from AI responses, URL state management via nuqs, dark mode, and responsive mobile layouts.

- Implemented **SSE streaming** for real-time chat with 15s keepalive heartbeats to defeat reverse-proxy timeouts, token-budgeted context management, and conversation summarization, applying the same real-time discipline that drives trading and price-feed UIs.
- Configured **GitHub Actions CI/CD** running **Playwright** end-to-end tests across **4 projects (web auth, dashboard auth, desktop Chrome, mobile Pixel 5)** and Docker Compose production deployment with multi-stage Dockerfiles, health checks, memory limits, and 30s graceful shutdown.
- Wired **Langfuse** for LLM observability, **Infisical** for cross-environment secrets, and **Traefik** for reverse proxy routing, treating production code quality and traceability as first-class concerns.

EDUCATION

University of Nigeria Nsukka, Enugu

BSc Computer Science - 4.1 CGPA *Graduation Date: Sep 2019*
