Hiring Team
neural frames
Berlin, Germany

Dear Hiring Team,

When I saw that neural frames is looking for a Product Engineer, I immediately thought about what makes your product genuinely different: 8-stem audio reactivity, frame-by-frame control, and multiple AI model integrations, all built by a small bootstrapped team that grew to over 100,000 paying customers without venture capital. That is exactly the kind of environment where I do my best work, and the kind of product I would be excited to help shape.

I am a fullstack engineer with 8 years of experience shipping end-to-end product features across React, TypeScript, and NodeJS, with deep hands-on AI integration work. Most recently, I solo-built OurNigeria (ournigeria.ng), an AI-powered civic platform where I architected a multi-agent system with 5 specialized LLM agents, a hybrid RAG pipeline processing 708K+ vector embeddings, real-time SSE streaming, and a Next.js frontend with 22 interactive chart types, all deployed via Docker with CI/CD and Playwright E2E tests. I went from idea to live product on my own, which is the kind of entrepreneurial ownership your listing describes.

At Genentech, I co-developed a full-stack Next.js chat widget powered by a RAG system using OpenAI GPT models, LangChain, and Chroma vector database, giving me direct experience integrating AI models into production user-facing products. I also led the migration of a clinical data platform from Vue.js to a React Chrome extension, owning the feature end-to-end while maintaining the legacy codebase in parallel. Across my career, I have consistently worked in product-focused roles where I prototype fast, ship iteratively, and respond directly to user feedback.

I would love to bring this combination of product instinct, AI integration depth, and fullstack shipping speed to neural frames. The chance to work on an AI music video generator alongside a small, passionate team building something creators genuinely love is exactly the kind of opportunity I am looking for. I would be glad to discuss how I can contribute.

Sincerely,

Ogbonna Arinze
