Peec AI Hiring Team
Berlin, Germany

Dear Hiring Team,

Peec AI is defining a new category: giving marketing teams visibility into how AI models like ChatGPT, Perplexity, and Gemini represent their brands. When the product is an analytics dashboard that 2,000+ marketing teams rely on daily, the frontend isn't just a layer, it is the product. That intersection of design craft, data-rich interfaces, and high-growth pace is exactly where I do my best work. I am excited to apply for the Senior Frontend Engineer role and bring 8 years of experience building polished, high-quality React and TypeScript applications to your team.

At Genentech (Roche), I serve as a Frontend Engineer where I architected a reusable design system in React and Radix UI with Tailwind CSS, delivering accessible, WCAG-compliant components that improved visual consistency and developer velocity across multiple product teams. I led the migration of a clinical data product from Vue.js to a React Chrome extension with TypeScript, owning the full scope from architecture through polished delivery. I also optimized performance through lazy loading, code splitting, and CDN asset delivery, measured via Lighthouse and Chrome DevTools. This reflects the kind of ownership and attention to frontend craft that Peec values: taking complex features end-to-end, pushing the boundaries of modern tooling, and maintaining high code quality across the codebase.

Previously, as Senior Frontend Developer at Descasio, I led the implementation of a React interface that achieved a 25% boost in user engagement, reduced bundle size by 30-40% through profiling with React Profiler and Lighthouse, and documented the component library in Storybook to ensure design-development alignment and visual consistency. More recently, I built the citizen-facing frontend for OurNigeria (ournigeria.ng) using React 19 and Tailwind CSS v4, featuring 22 interactive chart types with Recharts, dark mode, and responsive mobile layouts, demonstrating my comfort with the latest React and Tailwind ecosystem that Peec's stack relies on.

I am drawn to Peec's design-obsessed engineering culture, your emphasis on pixel-perfect delivery, and the energy of a team that has raised $29M and ranks in the top 1% of startups by growth. I would love to discuss how my experience building design systems, component libraries, and performance-optimized interfaces can contribute to Peec's next chapter.

Warm regards,

Ogbonna Arinze
