Hiring Manager
PRIOjet GmbH
Hamburg, Germany

Dear Hiring Manager,

Time-critical logistics lives and dies on the reliability of the software behind it. When on-board couriers are mid-transit and clients need real-time visibility, there is zero room for brittle APIs or sluggish interfaces. That challenge is exactly what draws me to the Software Developer Full Stack role at PRIOjet. With 8 years of full stack experience across NestJS, React, TypeScript, GraphQL, and PostgreSQL, I can contribute immediately to both your backend architecture and your frontend and mobile surfaces.

My most relevant work is OurNigeria (ournigeria.ng), a platform I architected end-to-end as an Nx monorepo managing 6 applications, including two NestJS backends (API server and document ingestion pipeline), three Next.js frontends, and a video generation service. I designed the PostgreSQL 16 database schema with Prisma v7, implemented SSE streaming with keepalive heartbeats for real-time data delivery, configured Docker Compose production deployments with multi-stage Dockerfiles and health checks, and set up CI/CD with GitHub Actions and Playwright E2E tests across 4 test projects. This mirrors the kind of full stack ownership PRIOjet needs: building backend features in NestJS with TypeScript, maintaining APIs, integrating third-party services, and shipping reliable, well-tested code.

At Genentech (Roche), I co-developed a full-stack Next.js chat widget powered by a RAG system, implemented JWT-based authentication with role-based access control and HTTP-only cookies, and integrated Playwright end-to-end tests into the CI/CD pipeline. Earlier, at ActivEdge Technologies, I built real-time data streaming systems using the EventSource API for a bank settlement solution processing millions of daily transactions, boosting settlement rates by 80%. These experiences have given me a strong foundation in building scalable, real-time systems with security best practices, which is essential for a logistics platform handling time-sensitive operations.

I am excited about joining a small, international team where I can take ownership across the stack and contribute to technical decisions on architecture and development priorities. I would welcome the opportunity to discuss how my experience building production NestJS backends, React frontends, and real-time systems can help PRIOjet scale its platform for the next wave of growth.

Sincerely,

Ogbonna Arinze
