**smava GmbH**
Hiring Manager
Berlin, Germany

Dear Hiring Team,

I am applying for the Senior Frontend Engineer (TypeScript & React) position at smava. As someone who built real-time financial transaction systems processing millions of daily settlements at ActivEdge Technologies, I understand the complexity of data-intensive fintech platforms and the precision they demand. smava's mission to make credit transparent, fair, and affordable for over 300,000 customers resonates with me, and I would welcome the opportunity to contribute to the frontend systems that power your comparison platform.

Over 8 years of professional experience, I have worked extensively with React and TypeScript across high-stakes environments. At Genentech (Roche), I architected a reusable design system using React and Radix UI that improved UI consistency, accessibility, and developer velocity across product teams, directly relevant to smava's in-house UI library and sharable component work. I also implemented GraphQL integrations, JWT-based authentication with role-based access control, and introduced Redux and React Query for state management and caching, all within a TypeScript codebase. At Descasio, I optimized frontend performance by reducing bundle size by 30-40% through systematic profiling with React Profiler and Lighthouse, achieving 35% faster load times, and established engineering standards with ESLint, Prettier, and CI/CD automation via GitHub Actions.

My fintech background at ActivEdge Technologies involved building critical payment modules (MasterCard, VISA, E-commerce) using React, Redux, and RxJS, with real-time data streaming via the native EventSource API. I also built dynamic data visualization dashboards with react-chartjs, which aligns with the data-rich interfaces smava's platform requires. More recently, with OurNigeria, I architected an Nx monorepo managing 6 applications with NestJS backends and Next.js frontends deployed via Docker and GitHub Actions on AWS, demonstrating the distributed systems and Node.js experience your role calls for.

I would be excited to bring my experience with design systems, performance optimization, and fintech frontend development to smava's engineering team. I look forward to discussing how I can contribute to your platform's growth and your engineering culture of impact and speed.

Sincerely,

Ogbonna Arinze
